

Intellimas[®] Reporting

It seems that one of the last things that gets addressed in the implementation of large applications is reporting. Project managers secretly hope that out of the box reports will suffice, but they rarely do. Whether you call it business intelligence, dashboarding, or reporting, business clients want their data presented in a variety of formats, and at their fingertips when they need it. The challenge is to be able to create reports that provide actionable intelligence, but without having to rely on a programmer.

Singletree Technologies' Intellimas[®] Reporting is a tool that fits the bill. It comes integrated with Intellimas[®] out of the box so you can create a multitude of reports from Intellimas[®] data. And remember, Intellimas[®] allows you to retrieve information from other databases, so this will expand the scope of what you can report. Intellimas[®] Reporting's data source architecture allows for all data fields, table relationships, and calculations to be determined up front so that power users or IT staff can easily create reports when they need them. Image oriented presentation reports, listings, charts, and Excel exports can be created with one tool without breaking the bank. Let your reporting strategy become a welcomed addition to your project with Intellimas[®] Reporting.

The image displays two windows from the Intellimas Reporting application. The left window, titled 'Style Listing', shows a report with a table of data and a 'Style Image' column. The right window, titled 'Report Administration', shows the tool's interface for designing and managing reports, including a preview of the 'Style Listing' report and a 'Group and Sort' dialog box.

Style Image	Intro Season Year	Style No	Category	Size Class	Designer	Comments
	Division	Description	Status	Size Range	Tech Designer

Features:

- Drag and drop field placement
- Unlimited formatting options
- Data sources contain all necessary database information
- User report feature allows you to create report groupings and unlimited filtering options
- Report emailing with standard schedules

Benefits:

- No need to rely on a programmer once the data sources are built
- Pre-defined data sources for some applications
- No need to access server during report deployment
- Client driven reports drive up the user acceptance of any software implementation.
