

Intellimas Costing

At last, the costing solution you have been waiting for is here. **Intellimas Costing** is the product you have been dreaming of when you deal with the problems of your existing process: Fumbling with massive spreadsheets, Costing one style at a time, Rekeying data over and over, Consolidating vendor costing charts into your charts, Inconsistent costing methods or formats. Our **Intellimas** products are all spreadsheet-like which means you can view, add, and edit many items at a time. These products have many of the familiar spreadsheet functions that everyone has become accustomed to, but all the information gets stored in a corporate database. **Intellimas Costing** is a highly configurable application that allows you to cost your products using almost every conceivable method: full package, CMT, LPD, DDP, in house, and more. We tailor the calculations to your specifications.

The screenshot displays the Intellimas Costing application interface. At the top, there is a menu bar (File, Edit, View, Actions, Administrator, Help) and a search grid. A search popup window titled "Costing Bill of Materials" is open, showing a table of material costs:

FID	PID	Material	Description	Placement	Quantity	Price
1765	1776	F1106	Waxed Linen	Shell	1.25	\$3.15
1765	1776	LM5001	Medium weight	See Constructio...	1	\$2.45
1765	1776	LP5035	Plain weave	Full lining	1	\$1.66
1765	1776	TH2100	T-18 Spun Polyester Core...	Core	0.35	\$0.25

The main application window shows a search grid with columns for Field, Operator, and Field Values. Below the search grid, there are several data tables. The top table lists items with columns for Status, Style #, and Style Description. The middle table lists items with columns for Status, Who Modified, Last Updated, and Name. The bottom table is a detailed costing table with columns for Status, #, Cost Request Date, Status, Cost Type, BOM Rollup, LDP, Mark Up %, Total Cost, and Comments. The bottom-most table lists items with columns for Status, Style #, Style Description, Total Units, Selected Vendor, Selected LDP, MU %, Ext. Cost, and Prod Typ.

Intellimas Costing

Intellimas Costing allows for vendor collaboration so you can issue RFQ's to your vendor or agent and they can update the quotes securely in the system. You can set up your RFQ's with as many scenarios as you want in order to make a better product decision before you proceed into development. In addition, vendors can be given access to a costing bill of materials where they can update the detailed costs for each quote. Once the RFQ's come in from the vendors, you can fully cost out the styles with our table driven freight, duty, agent fees and any other calculations needed to get to a full product cost. Wholesale or retail prices can be added for margin analysis, target setting, and what-if's. Our advanced entity engine allows us to read the data from your existing systems to retrieve all of your style information real time which minimizes the amount of keying that needs to be done. In addition, our integration platform will enable you to send key data back to other databases if needed.
