

Enhance Your WebPDM Data Management with Quick Entry

Creating tech packs can be a massive data entry effort. There never seems to be enough time to get them out the door and into the vendor's hands. And then come the changes. Singletree Technologies has created a WebPDM bolt-on product called Quick Entry that will enable you to speed up the data entry process and keep up with the constant changes. It is a spreadsheet-like entry tool that allows you to access many items on one screen. It's also a mass maintenance tool that allows you to add or swap out many items at once. Raw material items, folder summary fields, style colors, and bill of material components are all accessible with Quick Entry.

The screenshot shows the 'Item Quick Entry' application window. At the top is a menu bar (File, Edit, View, Actions, Administrator, Help) and a toolbar. Below is a 'Search Grid' with search criteria: Category - Item = Fabric and SubCategory - Item = Knit. The main area contains a data table with columns: Status, IC #, IC Description, Category, SubCategory, Item Type, Dim1 Type, Content, Last Updated, and Approved. The table lists various fabric items like '60/40 ACRYLIC/POLY LINING' and '10.5 OZ FLEECE'. A second table below shows BOM components with columns: Status, ItemDim1, IsActive, Vendor/VendorDesc, VendorMaterialCode, WeightDesc, Price, ItemDim2, ItemDim3, and Comments. It lists items like 'Copied', 'AIO-Antique Indigo', and 'CAY-Cayenne'.

Singletree
TECHNOLOGIES

Enhance Your WebPDM Data Management with **Quick Entry**

Module	Object	Functions
Item Quick Entry	Items and Item Details in the Item Properties Data Table	Add, edit, delete, and mass maintain items Add, edit, delete, and mass maintain item details
BOM Quick Entry	Design and Cost Specification	Add, edit, remove, and mass maintain components Add, edit, and remove combinations
Product Quick Entry	Folder Summary	Add folders Edit and mass maintain folder summary fields
Product Dimension Quick Entry	Product Summary	Add, edit, delete, and mass maintain dimension values

Features

- › Access many rows of data at the same time
- › Drill down capability to access detail levels
- › Edit data across many rows
- › Easily model items and styles to create new ones
- › Copy field values across many rows
- › Add colors to many styles or items
- › Find and replace colors or components
- › Comprehensive search to locate items or styles to be maintained
- › Additional on-screen filtering to further pinpoint data
- › Saved search by user
- › Sort, move, size, and freeze columns just like Excel™
- › Click-Once deployment requires no IT involvement on the client computer
